

PATIENT-CENTERED CARE

Empowered through Workflow Automation

The automation of processes, in which documents, information, and/or tasks are passed from one party to another for action, according to a set of rules. Result is elimination of waste and reportable costs reductions.

Now that the data is visible, you can see evidence where variations impacted positive outcomes and repeat that across your organization, therefore continuously improving outcomes for all patients.

Outcomes and
Cost of Care

Structured care plans that detail essential steps in the care of patients with a specific clinical problem. Defining these care pathways leads to value stream alignment.

With workflow applied to a clinical pathway, process level variations are now visible. By identifying the context in which variation occurs, caretakers are provided evidence of what works and what doesn't. You are now empowered with the data and control to make decisions.
